

1. Install Samba

```
sudo apt update
```

```
sudo apt install samba samba-common-bin -y
```

2. Edit Samba configuration

```
sudo nano /etc/samba/smb.conf
```

modify these settings:

```
#===== Share Definitions =====
```

```
[homes]
```

```
comment = Home Directories
```

```
browseable = yes
```

```
# By default, the home directories are exported read-only. Change the
```

```
# next parameter to 'no' if you want to be able to write to them.
```

```
read only = no
```

```
# File creation mask is set to 0700 for security reasons. If you want to
```

```
# create files with group=rw permissions, set next parameter to 0775.
```

```
create mask = 0755
```

```
# Directory creation mask is set to 0700 for security reasons. If you want to
```

```
# create dirs. with group=rw permissions, set next parameter to 0775.
```

```
directory mask = 0755
```

```
# By default, \\server\username shares can be connected to by anyone
```

4. Set a Samba password for your user

```
sudo smbpasswd -a haucs
```

```
sudo smbpasswd -e haucs
```

5. Restart Samba services

```
sudo systemctl restart smbd nmbd
```

To make sure it starts at boot:

```
sudo systemctl enable smbd nmbd
```

6. Check Samba status

```
sudo systemctl status smbd
```

7. Access from Windows

In File Explorer, type:

```
\\<your_pi_ip>\HomeShare
```

and log in with: haucs/haucs

- Username: pi
- Password: (the one you set with smbpasswd)
